To the City of Stevenson;

On Oct. 19, 2016, the city of Stevenson cut down a cottonwood tree, 150' ft. tall and about 6' ft. in diameter from the ~~South~~ West side of the Tittles property into the creek that surrounds the Staffords property. We called the City to ask if their removing the tree because its blocking the flow of the creek. Gordy and another city worker removed a few limbs on Nov. 7/16 and the tree is still in the middle of the creek.

As we understand this creek is a type 4-wetland Ares that requires a 25' ft. buffer zone. this creek is also a flood control Ares for water flow and can not be blocked. Now this tree will grow inside the creek, if not removed and create more problems with water flow and flood control.

Please Respond
